

Kotak Mahindra Bank Limited

BASEL III (PILLAR 3) DISCLOSURES (CONSOLIDATED) As at 31st March, 2015

Scope of Application and Capital Adequacy

Pillar 3 disclosures apply to Kotak Mahindra Bank Limited (KMBL) and its consolidated entities for regulatory purposes, wherein KMBL is the controlling entity in the group.

Basis of Consolidation for capital adequacy

The consolidated capital adequacy is based on consolidated financial statements of Kotak Mahindra Bank and its subsidiaries, prepared in accordance with guidelines for consolidated accounting and other quantitative methods vide circular DBOD.No.BP.BC.72/21.04.018/2001-02 dated 25th February 2003 issued by Reserve Bank of India (RBI). The capital charge is computed as per RBI guidelines for implementation of the New Capital Adequacy Framework (Basel III) released in July 2014.

In accordance with the guidelines issued by RBI, the insurance subsidiary has been excluded from consolidation for the purpose of capital adequacy. The entities which carry on activities of financial nature are considered for consolidation for capital adequacy purpose as stated in the scope for preparing consolidated prudential reports laid down in RBI guidelines. The Bank consolidates all subsidiaries as defined in Accounting Standard -21 (AS-21) *Consolidated Financial Statements* on a line by line basis by adding together like items of assets, liabilities, income and expenses. Further, investments in Associates are consolidated using the equity method of accounting as defined by Accounting Standard – 23 (AS-23) *Accounting for Investments in Associates in Consolidated Financial Statements*. KMBL and its subsidiaries which have been consolidated, constitute the “Group”.

The list of subsidiaries / associates consolidated as per AS-21 along with their treatment in consolidated capital adequacy computation is as under:

| Name of the entity | Country of incorporation | Included under accounting scope of consolidation (yes / no) | Method of consolidation | Included under regulatory scope of consolidation (yes / no) | Method of consolidation | Reasons for consolidation under only one of the scopes of consolidation |
|--|--------------------------|---|-------------------------|---|-------------------------|---|

| Phoenix ARC Private Limited | Asset Reconstruction company | 2,653.8 | 2,726.0 |
| ACE Derivatives and Commodity Exchange Limited | Commodity Exchange | 143.3 | 267.7 |

Capital Deficiencies

As at 31st March, 2015 the Bank and all of its subsidiaries are adequately capitalised. There are no capital deficiencies in consolidated as well as non-consolidated subsidiaries in the Group. The Bank maintains an oversight over its subsidiaries through its representation on their respective Boards and the Management Committee of the Bank is regularly updated.

Investment in Insurance subsidiary

The Group's investment in insurance subsidiaries as at 31st March, 2015 is deducted from regulatory capital for capital adequacy purpose under Basel III as given below:

₹ in million

| Name of the Entity | Total Equity Shareholders' Fund | % shareholding of the Group | Investment Value |
|--|---------------------------------|-----------------------------|------------------|
| Kotak Mahindra Old Mutual Life Insurance Limited | 12,707.0 | 74% | 3,776.2 |
| Kotak Mahindra General Insurance Limited | 7.8 | 100% | 10.5 |

The quantitative impact on regulatory capital of using risk weights on investments versus using the deduction method is given below:

₹ in million

| Method | Quantitative Impact |
|---|---------------------|
| Deduction method | 3,786.7 |
| Capital at 9% based on risk weighted assets | 340.8 |

The transfer of regulatory capital and funding within the Group is subject to restrictions imposed by local regulatory requirements. In particular, RBI establishes prudential limits on the level of exposure that the Bank may have to a related entity. There are no restrictions or other major impediments on the transfer of funds within the Group.

Capital Adequacy

The Group manages its capital position to maintain strong capital ratios well in excess of regulatory and Board Approved minimum capital adequacy at all times

In accordance with the guidelines of RBI, the Group has adopted standardised approach for credit risk, basic indicator approach for operational risk and standardised duration approach for market risk for computing capital adequacy.

Basel III Capital regulations are applicable to Banks in India from 1st April, 2013 and will be fully phased in by 31st March, 2019. With a view to strengthen the financial system and improve the shock absorbing capability, going forward, Banks are also expected to hold Capital buffers (Capital conservation buffer, countercyclical capital buffer and additional buffer for Domestic Systemically Important Banks) out of common equity.

Detailed guidelines on Basel III Capital Regulations and Guidelines on Composition of Capital Disclosure Requirements are issued by RBI and consolidated under the Master Circular – Basel III Capital Regulations July 2014.

The transitional arrangements for minimum Basel III capital ratios are given below.

| Minimum capital ratios | March 31,2014 | March 31,2015 | March 31,2016 | March 31,2017 | March 31,2018 | March 31,2019 |
|-------------------------------------|---------------|---------------|---------------|---------------|---------------|---------------|
| Minimum Common Equity Tier 1 (CET1) | 5.0 | 5.5 | 5.5 | 5.5 | 5.5 | 5.5 |

| | | | | | | |
|---|-----|-----|-------|-------|--------|------|
| Maximum Additional Tier 1 capital | 1.5 | 1.5 | 1.5 | 1.5 | 1.5 | 1.5 |
| Minimum Tier 1 capital | 6.5 | 7.0 | 7.0 | 7.0 | 7.0 | 7.0 |
| Maximum Tier 2 Capital | 2.5 | 2.0 | 2.0 | 2.0 | 2.0 | 2.0 |
| Minimum Total Capital* | 9.0 | 9.0 | 9.0 | 9.0 | 9.0 | 9.0 |
| Capital conservation buffer (CCB) | - | - | 0.625 | 1.25 | 1.875 | 2.5 |
| Minimum Total Capital +CCB | 9.0 | 9.0 | 9.625 | 10.25 | 10.875 | 11.5 |
| Phase-in of all deductions from CET1 (in %) # | 40 | 60 | 80 | 100 | 100 | 100 |

Approach to Capital Adequacy Assessment to support business activities

The diversified business activities require the Group to identify, measure, aggregate and manage risks effectively and to allocate capital among its businesses appropriately. The risk management framework lays emphasis on the Group's risk philosophy, proper organisational structure, risk and reward balance and is supported by dedicated monitoring and risk measuring mechanism.

The Group has a defined Risk appetite that sets the outer boundaries for risk taking and forms an input to the business and capital planning process. Besides the Bank, key legal entities within the group also have a defined Risk Appetite. Risk appetite forms a key input to the business and capital planning process by linking risk strategy to the business strategy through a set of comprehensive indicators.

The Risk appetite is a top-down process and consists of specific risk appetite statements, defined in quantitative terms, which are approved by the Board. The Risk appetite is subjected to periodic review, to align with risk perceptions and changing business environment. Performance against the Risk Appetite is monitored every quarter. The framework is operational at the consolidated level as well as for key legal entities thereby ensuring that our aggregate risk exposure is within our desired risk capacity.

There is a Group Internal Capital Adequacy Assessment Process (ICAAP) that assesses significant risks (Pillar 2), other than Pillar 1 risks, to which the Bank and key legal entities in the group are exposed. As part of this process, the Group identifies risks and determines the method and extent of risk mitigation. Risk mitigation takes place through strengthening policies, procedures, improving risk controls and having suitable contingency plans. For risks, that will be covered by capital, there are internal methodologies to determine the level of capital to cover those risks. The ICAAP framework thus assists in allocating capital in proportion to risks inherent in the business. The ICAAP also involves capital planning to ensure that the Group is adequately capitalised for the period ahead and to withstand stress conditions.

The Key risks that are assessed are:

- Credit Risk
- Market Risk
- Operational Risk
- Credit Concentration risk
- Underestimation of Credit Risk under Standardised Approach
- Interest Rate Risk in the Banking Book (IRRBB)
- Liquidity Risk
- Settlement Risk
- Reputation risk
- Strategic & Business Risk
- Model Risk
- Compliance Risk
- Group Risk

Based on the ICAAP assessment, the Group was well capitalized to cover Pillar I & Pillar II risks.

The Bank supplements capital adequacy computation by performing stress tests, guided by a Board approved stress testing policy. The Bank stress tests its portfolio and projections across a range of historical and hypothetical stress scenarios and assesses the impact on profit and loss and capital levels. Key companies within the Group also perform stress tests relevant to their portfolios.

Capital requirements for various risk categories as at 31st March, 2015

| Items | Amount |
|---|----------|
| ₹ in million | |
| (a) Capital requirements for credit risk | |
| Portfolios subject to standardised approach | 88,390.4 |
| Securitisation exposures | |
| (b) Capital requirements for market risk | |
| Using standardised duration approach | |
| Interest rate risk | 6,420.0 |
| Equity position risk | 5,585.1 |
| Foreign exchange risk (including gold) | 383.5 |
| (c) Capital requirements for operational risk | |
| Measured using basic indicator approach | 11,228.0 |

Computed as per Basel III guidelines

| Capital Adequacy Ratios | Consolidated | Standalone |
|-------------------------|--------------|------------|
| Common Equity Tier I | 16.8% | 16.2% |
| Tier I | 16.8% | 16.2% |
| Total CRAR | 17.6% | 17.2% |

Credit Risk

Credit risk arises as a result of failure or unwillingness on part of customer or counterparties' to fulfil their contractual obligations. These obligations arise from wholesale, retail advances and off balance sheet items. Credit risks also emanate from investment and trading portfolio by way of issuer risk in debt paper, settlement risk on OTC trades and downgrade risk on non SLR investments and OTC contracts.

Credit risk is managed in the Bank through committees that approve credit and an enterprise wide risk management framework which sets out policies and procedures covering the measurement and management of credit risk.

The Bank's credit policies and process notes articulate the credit risk strategy of the Bank and thereby the approach for credit origination, approval and maintenance. These policies define the Bank's overall credit sanction criteria, including the general terms and conditions. The policies / processes generally address such areas as target markets / customer segmentation, qualitative-quantitative assessment parameters, portfolio mix, prudential exposure ceilings, concentration limits, structure of limits, approval authorities, exception reporting system, prudential accounting and provisioning norms, etc. They take cognisance of prudent and prevalent banking practices, relevant regulatory requirements, nature and complexity of the Bank's activities, market dynamics, etc.

The Bank's credit exposure is primarily categorised into retail and wholesale borrowers. Retail exposure is mostly schematic lending (for e.g. vehicle loans, mortgage loans, personal loans etc) within pre-approved parameters for smaller value, to individuals and small businesses. These may be asset backed or on unsecured basis. Wholesale borrowers are internally categorised as belonging to corporate, mid-markets or financial institutional group. Retail credit lending is largely decentralised and based on predefined parameters and managed through product definition and portfolio monitoring.

A Credit appraisal analysing the credit risk, financial status of borrower, industry risk, etc. is prepared and reference checks, bureau data and NCIF checks are completed as part of the credit appraisal process.

In retail loans there is a loan origination systems (LOS) on which cases are tracked for completion and policy deviations if any. KYC checks are done by the Sales team and the Risk Containment Unit (RCU). Post RCU check, Credit team does tele verification / personal verification, if required, evaluates the proposal based on documents and as per laid down process.

All credit proposals are sanctioned as per the Delegation matrix specified in the Credit Approval Authorities Policy. The delegation matrix is based on volume as well as rating of the borrower.

Wholesale credit exposures are managed on a case by cases basis, through credit appraisal by an independent credit risk team and post sanction monitoring.

Credit risk management processes

The Bank focuses on ensuring that credit risk taking is in line with approved policies, while

meeting risk-reward objectives. The Bank expects to achieve its earnings objectives and to satisfy its customers' needs while maintaining a sound portfolio.

The Board has delegated credit approval authority to the Management Committee, Credit Committee and other approval authorities. Credit Committee may further delegate the responsibility as required from time to time. Credit Committee ensures that the credit processes are in compliance with regulatory and internal norms and are enforced across the Bank in a uniform manner.

The Bank's credit process is divided into three stages - pre-sanction, sanction and post - sanction.

At the pre-sanction stage, the independent credit function within respective businesses conduct credit appraisal and assign a credit rating based on internal rating model.

Based on the independent credit risk assessment, appropriate credit decisions are taken by the sanctioning authorities. The Bank has a tiered credit sanction process where credit approvals are reported to the next higher level.

As part of the post sanction process, the credit administration team processes documentation, on the completion of which, credit is disbursed.

In accordance with credit policies, the borrowers are subject to periodic review with updated information on financial position, market position, industry and economic condition, delinquency trends and account conduct.

Retail monitoring teams monitor the retail portfolio through delinquency monitoring, early warning indicators identification, collection efficiency analysis, churning and utilization.

The Bank has an enterprise wide Early Warning Signal (EWS) framework that helps identify signs of credit weakness at an early stage for the Bank to work closely with the borrowers and take suitable remedial actions like reducing exposure, prescribing additional security / comfort of cash flows etc to reduce risk.

Besides the EWS framework, the Bank has also implemented a Loan Review Mechanism (LRM) that does a comprehensive assessment of the overall credit across credit appraisal, assessment, sanction, post sanction activities and also checks compliance with internal policies and regulatory framework. The LRM framework helps to identify weaknesses if any in the credit value chain and suitable controls are implemented to strengthen the credit process.

To maintain a diversified portfolio, the Bank operates within Board approved limits in its credit portfolio. The Bank also constantly reviews its concentration across borrowers, groups, portfolio segments, geography, sectors and ratings. This helps the Bank maintain a diversified portfolio.

Credit Risk Management Principles

The Bank measures and manages its credit risk based on the following principles:

- The Bank has a Basic Customer Acceptance Criteria for appraisal of corporate and mid-market customers. The Retail business is governed by approved product papers in selection of customers.
- The approval of all limits to counterparties should be in line with the credit policy of the Bank. Such approval should generally be within the Bank's portfolio guidelines and credit strategies.
- The credit worthiness of borrowers is regularly reviewed and monitored at least once a year. Customers with emerging credit problems are identified early and classified accordingly. For retail loans, delinquency trends are monitored on an ongoing basis to identify any deterioration of portfolio quality. Remedial action is initiated promptly to minimize the potential loss to the Bank.
- All business units have a credit monitoring function which monitors conduct of the account post disbursement.

Credit Risk measurement systems

Credit Rating is an integral part of the lending decision. The Bank has a two scale internal rating model for wholesale exposures that assigns obligor ratings & facility ratings. The rating model is capable of rating large and emerging corporates, traders, brokers, Non-Banking Finance Companies (NBFCs), real estate clients and service sector clients. Ratings are supported by financial analysis and combined with credit head's judgment to arrive at the final rating for a borrower / counterparty. The Bank uses an 18 point scale to grade borrowers.

The obligor rating provides an estimate of the probability of default of the borrower in the next year. The obligor rating is independent of the type/nature of facilities and collaterals offered. The obligor rating consists of quantitative and qualitative factors and includes assessment of customer's financial position including Net Worth, Profitability, Cash Flows, Repayment Capacity, Debt protection metrics and credit standing. Besides financial parameters, industry in which the customer operates business & management risks are also considered while arriving at the obligor rating. The underwriting process is based on obligor rating.

The facility ratings take into account structuring features of specific facilities and the collaterals offered. The facility rating provides an estimate of the loss given default (LGD) for the facility.

The product of the obligor rating (Probability of Default) and Facility rating (LGD) provides an estimate of the expected loss against each facility.

The rating model is being enhanced to incorporate additional variables that are identified by the bank as impacting credit quality. The model is also being fine-tuned to give required inputs to estimate Probability of Default (PDs) and Loss Given Default (LGDs) based on internal experience.

The Bank has strong governance on the rating models and framework for changes to the model or enhancements and operates under the Board approved Model Risk Policy. The rating model is drawn up in accordance with Basel II framework.

For the retail portfolio, the Bank has processes for risk assessment of retail loan exposures. These are through product notes, processes or policies, that specify entry criteria for loan origination, bureau data, minimum margins on collaterals, maximum Loan to Value Ratios (LTV) for products, product tenor etc. The Bank is constantly improving the quality of origination through better understanding of its portfolio and improved underwriting standards. Portfolio delinquency trends are monitored periodically.

All credit proposals are put up under the approved framework of policies. Discussions are also done on whether the credit portfolio is within the overall Board approved risk appetite. Performance against key Board approved limits are periodically reported and discussed at the Board. This enables the Board to analyse exceptions level and also assess compliance with its policies.

The Bank has a defined stress testing policy that lays down the framework for stress testing. Credit risk framework covers corporate as well as retail portfolio and the portfolios are stressed on approved scenarios to assess the impact of stress conditions on profitability and capital adequacy. The stress tests are performed periodically and results of these stress tests are placed before the RMC & the Board.

Concentration of credit risk arises when a number of obligors are engaged in similar activities, or operate in the same geographical areas or belong to the same industry. Risk appetite of the Bank mandates a well-diversified portfolio and has quantitative metrics for credit concentration. The Bank operates within Board approved limits in its loan portfolio that cover obligor concentration, group concentration, substantial exposures, sector & industry concentration & unsecured lending. These limits are monitored periodically and reported to senior management. Assessment of credit concentration risk is part of the ICAAP.

The Bank prepares its risk profile on a periodic basis and monitors the level of credit risk (low / moderate / high) and direction of change in credit risk (increasing / decreasing / stable) at the portfolio level on a regular basis. The risk profile is reported to the senior management and the Board.

Definition and classification of non-performing assets (NPA)

The Bank classifies its advances into performing and non-performing advances in accordance with extant RBI guidelines.

An NPA is defined as a loan or an advance where;

- interest and/ or installment of principal remain overdue for a period of more than 90 days in respect of a term loan;
- the account remains 'out of order' – in respect of an overdraft/cash credit (OD/CC); and
- the bill remains overdue for more than 90 days in case of bills purchased and discounted.
- in respect of derivative transactions, the overdue receivables representing positive mark-to-market value of a derivative contract, if these remain unpaid for a period of 90 days from the specified due date for payment
- An existing NPA account is upgraded to standard category only on collection of all overdues.

In respect of NBFCs, if the overdue is in excess of 180 days, the loan is classified into sub-standard, doubtful, and loss as required by RBI guidelines.

Cheques deposited at quarter end but returned in subsequent month are considered for NPA and provisioning.

Out of Order

An account should be treated as 'out of order' if the outstanding balance remains continuously in excess of the sanctioned limit/drawing power for a continuous period of 90 days. In cases where the outstanding balance in the principal operating account is less than the sanctioned limit/drawing power, but there are no credits continuously for 90 days as on the date of balance sheet or credits are not enough to cover the interest debited during the same period, these accounts should be treated as 'out of order'.

Overdue

Any amount due to the bank under any credit facility is 'overdue' if it is not paid on the due date fixed by the Bank.

Further, NPAs are classified into sub-standard, doubtful and loss assets based on the criteria stipulated by RBI. A sub-standard asset is one, which has remained NPA for a period less than or equal to 12 months. An asset is classified as doubtful if it has remained in the sub-standard category for a period exceeding 12 months. A loss asset is one where loss has been identified by the Bank or internal or external auditors or during RBI inspection but the amount has not been written off fully.

The loans of subsidiaries are classified as non-performing in accordance with the guidelines prescribed by their respective regulators.

Total credit risk exposures as at 31st March, 2015

₹ in million

| Overall credit exposure | Fund based | Non-fund based | Total |
|------------------------------|------------|----------------|-------------|
| Total gross credit exposures | 891,638.7 | 158,822.0 | 1,050,460.7 |

Includes all entities considered for Basel III capital adequacy computation

Credit exposure include term loans, working capital facilities (i.e. funded facilities like cash credit, demand loans, temporary limits and non-funded facilities like letter of credits, acceptances and guarantees).

Geographic distribution of exposures as at 31st March, 2015

Credit risk – portfolios subject to the standardised approach

External Ratings

As per the NCAF, the Bank has adopted standardised approach for measurement of credit risk. The risk weights under this approach are based on external ratings of borrowers. The Bank has identified the following External Credit Assessment Institutions (ECAIs) as approved rating agencies:

- a. Domestic credit rating agencies: CRISIL, ICRA, CARE and India Ratings (erstwhile FITCH India)
- b. International rating agencies: S&P, FITCH and Moody's

The Bank assigns risk weight on the basis of long-term and short-term rating of the borrower. The issue/issuer ratings of the ECAI's are considered for the borrowers and the risk weights are then derived on a case by case basis in accordance with the rules laid down by RBI as part of the New Capital Adequacy Framework.

Credit exposures by risk weights as at 31st March, 2015

₹ in million

| Exposure category | Fund based | Non-fund based | Total |
|----------------------------|------------------|------------------|--------------------|
| Below 100% risk weight | 338,250.1 | 92,880.2 | 431,130.3 |
| 100% risk weight | 326,195.8 | 40,923.3 | 367,119.1 |
| More than 100% risk weight | 213,070.7 | 7,117.8 | 220,188.5 |
| Deducted | - | - | - |
| TOTAL | 877,516.6 | 140,921.3 | 1,018,437.9 |

includes all entities considered for Basel III capital adequacy computation, net of risk mitigation as per the standardised approach

Credit Risk Mitigation

The Bank has a credit risk mitigation policy that lists possible credit risk mitigation techniques and associated haircuts as envisaged in RBI guidelines. The objective of this Policy is to enable classification and valuation of credit risk mitigants in a manner that allows regulatory capital adjustment to reflect them. The Policy adopts the Comprehensive Approach, which allows full offset of collateral wherever applicable against exposures, by effectively reducing the exposure amount by the value ascribed to the collateral. The collateral values are suitably adjusted by (appropriate haircuts to take account of possible future fluctuations in their value due to market movements).

The list of eligible financial collaterals recognized by the Bank for risk Mitigation is as follows:

- Cash / Fixed deposits with the Bank
- Gold – including Bullion & Jewelry
- Central & State Government securities
- Kisan Vikas Patra and National Savings Certificates
- Life Insurance policies with a declared surrender value of an insurance company which is regulated by the insurance sector regulator
- Debt securities rated investment grade or better
- Mutual Fund units where investment is in debt instruments

The Bank has taken ₹ 32,022.8 million of eligible financial collateral benefit in the capital computation as at 31st March, 2015.

Where available, the Bank also makes use of credit mitigation by way of guarantees / letters of credit provided by other eligible guarantors / banks as per RBI guidelines. Where eligible guarantees are used towards credit mitigation, the Bank follows a substitution approach and applies the risk weight of the guarantor in lieu of the obligor risk weight.

The highest share of Financial Collaterals considered for Credit Risk Mitigation, is by way Cash/FD's and thus there is not much risk concentration envisaged on account of these mitigants.

₹ in million

| Type of Credit exposure | Eligible financial collateral after haircut | Covered by Guarantees/Credit derivatives |
|----------------------------|--|--|
| Total Exposure | 32,022.8 | 5,359.5 |

Exposure management measures

The Corporate Credit policy of the Bank defines the exposure management measures. Exposure includes credit exposure (funded and non-funded credit limits), investment exposure (including underwriting and similar commitments) and derivatives exposure which includes MTM and Potential Future exposure as per current exposure method.

The Bank operates within Board approved limits in its loan portfolio. Key portfolio limits include:

- Single borrower limits
- Exposure to borrower groups
- Substantial exposure limits
- Limits on capital market exposure
- Limits on real estate exposure
- Limits on exposure to NBFCs
- Industry exposure limits
- Limits on unsecured lending

Performance against these limits are monitored periodically and reported to the appropriate authorities.

The Bank has a policy on exposure to Borrowers with Unhedged Foreign Exchange. The Corporate Credit Policy stipulates review of unhedged forex exposure as part of every credit appraisal for sanction of facilities to a borrower. The Bank maintains provisions and capital on its exposure to borrowers with unhedged foreign currency exposure, as per regulatory guidelines.

To manage credit risk exposure on treasury contracts, the Bank operates within approved limits on Countries, Inter Bank counterparties and corporates.

Securitisation

a. Securitisation objectives and policies

Securitisation of assets is undertaken with the following objectives:

- **Meeting credit needs of borrowers** – Due to various constraints such as single party and group exposure norms, paucity of capital, internal sectoral exposure norms, etc, at times the Group is unable to meet the entire credit requirements of the borrowers. Securitisation helps overcoming such constraints and meet customer's credit needs.
- **Assistance in management of asset-liability mismatches** – With traditional on balance sheet borrowing and lending, the maturity of assets tends be much longer than that of the liabilities. Securitisation effectively makes Group's assets more liquid providing scope to more flexibly manage maturity mismatches.
- **Reduction of credit risk, interest rate and liquidity risk** – Through Securitisation, the Group can transfer credit, interest rate and liquidity risks to third parties.
- **Freeing up of capital and Improvement in return on capital** - Securitisation removes assets from the Group's balance sheet and hence frees up capital for other uses. It also improves return on capital.
- **Contingency plan** – Securitisation of retail asset portfolio is considered as an important element of the contingency funding plan of the Group.

b. The major risks inherent in securitisation/loan assignment transactions are given below:

- **Credit Risk**
Investors in a securitisation transaction may bear a loss in the event of shortfall in credit enhancement provided. Where credit enhancement is provided in the form of a corporate guarantee, the investor is exposed to risk of a downgrade in the rating of the corporate guarantee provider. In case of loan assignment transactions, the assignee bears the loss arising from defaults/delinquencies by the underlying obligors.
- **Market Risk:**
 - Liquidity Risk

This is the risk arising on account of absence of a secondary market for asset backed securities, which provides exit options to the investor/participant.

- Interest Rate Risk
Fluctuation in interest rates impact the valuation of securitisation and may lead to mark to market losses.
- Prepayment Risk
Prepayments in the securitised /assigned pool result in early amortisation and loss of future interest (reinvestment risk) to the investor.

Role played by the Group in the securitisation process:

- **Structurer:** The Bank scans the market to identify potential investors and structures the transaction to meet their requirements in compliance with the extant guidelines.
- **Collection and paying agent:** The SPV may appoint the concerned entity in the Bank as the collection and paying Agent. In such cases, the Bank collects the amounts due from the underlying obligors on the due dates and remits the same into the account of the SPV.

c. Summary of Group's accounting policies for securitisation activities

In terms of RBI guidelines the Group sells assets to SPV only on cash basis and the sale consideration is received not later than the transfer of the asset to the SPV. Any loss arising on account of the sale is accounted immediately and reflected in the profit and loss account for the period during which the sale is affected and any profit/premium arising on account of sale is amortised over the life of the securities issued or to be issued by the SPV.

In case the securitised assets qualify for derecognition from the books of the Group, the entire expenses incurred on the transaction e.g. legal fees, etc., is expensed at the time of the transaction and is not deferred. Where the securitised assets do not qualify for derecognition the sale consideration received is treated as a secured borrowing.

d. Rating of the securitisation transactions:

The Group uses the ratings provided by external credit rating agencies viz. CRISIL, India Ratings (erstwhile FITCH India), ICRA and CARE for the securitization of corporate loans and retail pools.

e. Breakup of the exposure securitised by the Group during the year and subject to securitization framework:

A. Banking Book

There are no outstanding under the securitization exposures as at 31st March, 2015. No securitization activities were undertaken by the Group during the year ended 31st March, 2015.

B. Trading Book

Breakup of the exposure securitised by the Group during the year and subject to securitization framework:

₹ in million

| Sr. No. | Type of Securitisation | Amount |

Market Risk in Trading Book

Market risk management policy

Market Risk is the risk that earning or capital will be affected by adverse changes in market risk factors, namely interest rates, foreign exchange rates, volatilities, credit spreads, commodity and equity prices.

The capital market risk management policies and procedures are based on the product traded.

For Regulatory capital purposes, the Group calculates its Market Risk Capital as per the Calculation Rules under the Standardized Measurement Method (SMM).

Market Risk Management encompasses the following imperatives:

- Managing Interest Rate Risk in Trading & Banking Books
- Managing Currency & other Trading Book Risks
- Proper Valuation & Measurement
- Compliance with regulatory & Board guidelines
- Oversight over the operation and execution of market transactions

Market Risk for the Bank and each of its major subsidiaries is managed in accordance with policies approved by the respective Boards or ALCO. These policies ensure that transactions in Debt, Capital, Foreign Exchange, Derivatives & other markets are conducted in accordance with sound & acceptable business practices and are as per the extant regulatory guidelines & laws governing transactions.

The policies are reviewed regularly to incorporate changes in regulatory guidelines and business and economic environment.

Structure and organization of the Market Risk Management functions

The Group's Risk Management Architecture is overseen by the Board of Directors. The Board of Directors defines Risk Appetite and approves appropriate policies to manage risks. The Asset Liability Management Committee (ALCO) oversees the Market Risks in the Trading Book and the Banking Book.

Risk limits are monitored and utilizations are reported by the Market Risk Management unit. Market Risk Management unit is independent of the dealing function and the settlements function and reports directly to the Group Chief Risk Officer. The unit is responsible for identifying and escalating any limit excesses on a timely basis. This unit ensures that all market risks are identified, assessed, monitored and reported – for management decision making.

The Group uses a comprehensive range of quantitative tools and metrics for monitoring and managing risks. The Group continually assesses the appropriateness and the reliability of the quantitative tools and metrics in the light of the changing risk environment.

The limit-framework is comprehensive and effectively controls market risk. Limits on sensitivity measures like PV01, Duration, Delta, Gamma, Vega etc. and other limits like loss-limits, value-limits, gap-limits, deal-size limits, holding-period limits constitute the limit-framework

Value at Risk

Value-at-Risk (VaR) is used to quantify the potential price-risk in the portfolio. Value-at-Risk (VaR) is a statistical measure that estimates, at a certain confidence level, the potential decline in the value of a position (or portfolio) under normal market conditions - assuming a holding period.

Value-at-Risk is computed for each type of market risk factor i.e. interest rate, foreign currency, equity etc. The VaR model is based on Historical Simulation and a Confidence level of 99%. The VaR model is periodically validated through a process of Back-testing. Metrics like Stressed Value-at-Risk are used to supplement VaR. Stress testing & Scenario Analysis are periodically performed to measure the exposure of the Bank to extreme, but plausible market movements.

Stress Testing

The Group periodically stresses the portfolio to highlight the potential risks that may arise due to events that are rare but plausible. The Group conducts various tests like the impact of shock to one risk factor, extreme events that may change various risk factors simultaneously and worst case scenario that captures the potential damaging shift in various market risk factors. During the year, the Group was within the internal and regulatory capital ratios after applying the stress scenarios. The stress test results and the subsequent capital requirements are placed before the RMC & the Board.

Liquidity Risk

Liquidity refers to the Group's ability to fund increase in assets or withdrawals of liabilities and meet both expected and unexpected cash and collateral obligations at reasonable cost without adversely affecting its financial condition and liquidity risk arises where the Group is unable to meet such obligations.

There is a Group liquidity risk management policy which lays down the structure for liquidity risk governance and its management for the Group. The Group follows a decentralized model of liquidity management where in each entity is responsible for its own liquidity planning and fund management. The entities have either Asset Liability Management Committee (ALCO) or senior management, who is responsible for establishing framework for managing and monitoring liquidity risk. The Bank's Asset Liability Management Committee (ALCO) is responsible for overseeing the management and governance of liquidity risk for Group entities.

Liquidity risk management in the Bank (standalone) is governed by Board approved Asset Liability Management (ALM) policy which provides the framework for its monitoring & management. The Bank actively manages its liquidity risk covering both market funding risk and market liquidity risk. The Bank maintains a diversified funding profile with emphasis on building retail franchise to increase customer deposits. The Bank ensures that there is sufficient liquidity headroom available, including liquid assets, at all times to manage any contingency.

The Bank dynamically manages the daily queue of payments, forecasting the quantum and timing of cash flows, prioritizing critical payment transactions, assessing the drawing power of intraday liquidity facilities, etc. Considering the inter-dependencies that exist among systems, which may lead to liquidity dislocations that cascade quickly across many systems, especially banks, ALCO has set thresholds for inter-bank liabilities, call money borrowing and lending limits.

Liquidity risk is assessed from both structural and dynamic perspective and the Bank uses various approaches like stock approach, cash flow approach & stress test approach to assess liquidity risk. The Bank uses liquidity gap analysis to measure cash flow mismatches at different

time bands. The cash flows are bucketed based on the residual maturity of the cash flows or the projected behavior of assets, liabilities and off-balance sheet items. Bank also manages its liquidity on a dynamic basis to supplement the liquidity gap analysis by estimating net cash outflow or inflows for business units considering their business projection for the next 3 months. The Bank also employs stock approach to assess various aspects of liquidity risk such as stability of funds, liquid assets cover, funding concentration, etc.

The Board-approved Contingency Liquidity Plan (CLP) is another liquidity measurement and management framework. CLP articulates the management action plan to be adopted in case of liquidity crises. The Bank has established and actively uses ratio-based Early Warning Indicators (EWI) framework for tracking impending liquidity stresses. Control & Response Teams are designated. Potential contingency liquidity sources are identified.

The Bank follows scenario based approach for Liquidity Stress Testing. These scenarios & assumptions are employed to evaluate the impact of stress on the existing liquidity position of the Bank. Market Liquidity Risk is considered through haircuts to sell liquid assets considering instrument type, expected change in interest rate in liquidity crisis, etc. Bank also assess the impact on P&L in utilizing liquidity mitigates (e.g. selling liquid assets, marginal standby facility, refinance head rooms, etc.) with appropriate haircuts and increased cost of funding.

The Bank has also implemented Basel III liquidity standards i.e. liquidity coverage ratio (LCR) and net stable funding ratio (NSFR) to measure liquidity under stress conditions. These measures have been incorporated as part of Bank's risk appetite definitions and thresholds.

Hedging and risk mitigation

The Bank has defined limits on the positions that can be taken and all the business groups are required to adhere to the same. The hedging transactions are periodically assessed for hedged effectiveness in accordance with the applicable guidelines.

Market risk capital charge

| | ₹ in million |
|-------------------------------|-----------------------|
| Risk category | Capital charge |
| Interest rate risk | 6,420.0 |
| Equity position risk | 5,585.1 |
| Foreign exchange risk | 383.5 |
| Total capital required | 12,388.6 |

Includes all entities considered for Basel III capital adequacy computation

Operational Risk Management (ORM)

The Group has well defined operational risk management objectives, strategies and governance structures. The Bank has a comprehensive ORM Framework that covers all activities and governance structure that helps manage operational risk effectively. Through implementation of the Operational Risk Framework and related policies, businesses are able to adopt a structured approach to identify, assess and monitor Operational Risk exposures, design appropriate mitigation strategies, and provide timely and effective reporting to Risk Committee & the Board. The Operational risk framework is supported by policies and processes that help business manage operational risk within approved tolerances, on behalf of its stakeholders.

On the basis of the Enterprise wide Risk Management policy, operational risk policies are prepared for the Bank. These policies outline the ORM governance structure, key risk assessment, risk monitoring and risk mitigating activities. The policy applies to all business lines within the Bank.

Most Group entities, including the Bank, have Risk Management Committees to manage operational risks. Separate sub committees also exist in a few entities to screen all potential new mandates for profitability and to ensure that compliance, legal and reputational issues are addressed before accepting any mandate. Hence, depending upon the size of the group entity, the operational risk governance structure is adequate to manage material operational risks.

Senior Management in all group entities is actively involved in the management of operational risk and implementation of the respective ORM Frameworks / policies. Group entities manage operational risk through internal control departments, which vary in sophistication depending upon the business needs.

The internal control framework ensures that process related operational risks are minimized by way of regular monitoring and audits. The Group internal audit team, following RBI's risk based audit methodology, and the group compliance department provide sound platform for operational risk management along with risk management unit.

The following are some of the key techniques applied by Bank and / or group companies to manage operational risks -

- The Bank has built into its operational process segregation of duties, clear reporting structures, well defined processes, operating manuals, staff training, verification of high value transactions and strong audit trails to control and mitigate operational risks.
- New Product & activity notes prepared by business units are reviewed by all concerned departments including compliance, risk management and legal. All concerned departments coordinate and discuss key operational risk issues involving people, process, technology, external factors, etc. so as to minimize them or ensure adequate controls over them. In subsidiaries, internal controls unit reviews the product notes in consultation with the respective departments, including compliance and legal.
- The Operational risk team performs detailed risk analysis and root cause analyses on operational risk events, reported by business units, to identify inherent areas of risk and suggest suitable risk mitigating actions which are monitored for resolution. The Bank wide unusual event reporting and capture system forms the basis for this analysis. The Operational risk team also proactively scans information on external events occurring in the industry to ensure that the Bank can respond suitably to similar incidents.
- The Bank has in place a 'Risks and Controls Self Assessment' programme for formally assessing operational risks and related controls to mitigate these risks. The self assessments are performed by individual business units and functions. As part of the annual Risks and Controls Self Assessment ("RCSA") process, areas with high risk potential are highlighted and business unit / function either proposes mitigating measures to resolve the issue or provides a rationale for why the risk is acceptable.
- The Bank continuously takes various steps to increase the overall level of operational risk awareness amongst staff at all levels using various tools like trainings, workshops,

risk assessment exercise and process related compliance certification / testing, etc. Operational risk profile reports for business divisions are reviewed and discussed with the department's senior management. This enables the Bank to detect changes to the units risk profile at an early stage and take necessary corrective actions. The Bank believes that this process helps build a strong risk management culture and increased level of risk awareness amongst work force.

- The Group level IT Security Committee provides direction for mitigating the operational risk in IT security. There is group wide IT security programme (ARISTI) to ensure complete data security and integrity.
- Disaster recovery and Business Continuity Plans (BCP) have been established for significant businesses to ensure continuity of operations and minimal disruption to customer services. These plans are periodically tested and reviewed to ensure their effectiveness to mitigate unforeseen risks arising out of disruptions.
- In the larger group entities, Risk Containment Unit has been setup within Business Units, which identifies and monitors risk on an ongoing basis including sample checks and control testing.
- Risk transfer via insurance is a key strategy to mitigate operational risk exposure at the Bank. The Operational Risk team helps assess the quantum of insurance cover required and aligns it to the Bank's current and projected operational risk exposures.

Approaches for computation of operational risk capital

In accordance with the guidelines issued by RBI, the Bank has adopted the "Basic Indicator Approach" for calculation of operational risk capital for capital adequacy purposes.

As per these guidelines, the capital for operational risk is based on a single indicator: income. The Capital charge associated with operational risk is calculated as 15% of average positive annual gross income of the previous three years. The Group's operational risk capital charge using basic indicator approach is ₹ 11,228.0 million as at 31st March, 2015.

At an appropriate time, the Group also plans to adopt the AMA approach for maintaining operational risk capital. Under this approach, operational risk capital is computed on a VaR methodology by evaluating risks on the basis of their likelihood (probability) and the financial consequence (severity) of such an event.

Interest Rate Risk in the Banking Book (IRRBB)

The impact of adverse movements in interest rates on financials is referred to as interest rate risk. The very nature of the financial intermediation business makes the Group susceptible to interest rate risk and unmanaged risk could potentially pose a significant threat to the Group's earnings and capital.

Interest rate risk results from both trading book and banking book. The impact of interest rate risk on trading book is actively measured through a variety of risk metrics like PV01, option greeks, VaR. etc. The tolerance with respect to exposure to market risk in the trading book is

articulated through various risk limits and monitored through different MIS reports. The Group also provides for capital for exposure to market risk in the trading book.

For banking book, interest rate risk arises through mismatches in re-pricing of interest rate sensitive assets (RSA), rate sensitive liabilities (RSL) and rate sensitive off-balance sheet items. As interest rate risk can impact both net interest income (NII) and value of capital, it is assessed and managed from both earning and economic perspective.

ALCO is the guiding body for management of IRRBB in the Bank and sets the overall policy and risk limits. Balance Sheet Management Unit (BMU), which is part of the treasury, is entrusted with the responsibility of IRRBB and works out appropriate strategies including hedging in consultation with ALCO to mitigate the risk. ALM Risk unit, which is a part of risk management team independently measures and monitors the interest rate risk. As a policy, no interest rate risk is retained within the business units other than treasury and it is transferred from business units to BMU using Funds Transfer Pricing (FTP). FTP rates are reviewed by the ALCO in its meetings periodically and are calibrated considering the markets, business needs and overall balance sheet plans.

Earning at Risk (EaR) is a short term interest rate risk measure which assesses the change in NII by estimating the impact on interest income from rate sensitive assets and interest expense on rate sensitive liabilities including off-balance sheet items. The Bank has set limit for change in NIM for given change in interest rates to manage the re-pricing gaps. Basis the overall NIM limit, re-pricing gap limits are also set for various re-pricing time bands.

Group uses Economic Value of Equity (EVE), which is a long term risk measure to assess the change in value of equity due to change in economic value of asset and liabilities. The duration gap approach is used to determine the sensitivity of EVE. Modified duration is computed for all assets, liabilities (excluding equity capital) and rate sensitive derivatives to assess the Leveraged Duration Gap / Duration of Equity. Leveraged Duration gap is computed including and excluding trading book and are subject to interest rate shocks to assess the impact on EVE. Group has incorporated change in EVE as percentage of Tier I capital in its risk appetite definition and set a threshold for it for a given change in interest rate.

Details of increase (decline) in earnings and economic value for upward and downward rate shocks based on Balance Sheet as at 31st March, 2015 are given below:

- Earnings Perspective
Impact on earnings of 100 bps parallel shift in yield curve ₹ 1,661.9 million
- Economic Value Perspective {Market Value of Equity (MVE)}

| | |
|--|-------------------|
| Impact on MVE of 100 bps adverse parallel shift in yield curve | ₹ 4,818.4 million |
| Impact as a percentage of Tier I Capital | 2.31% |

Exposures Related to Counterparty Credit Risk

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before final settlement of the transaction's cash flows. An economic loss would occur if the transaction or portfolio of transactions with the counterparty has a positive economic value for the Bank at the time of default. Unlike exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss whereby the market value for many different types of transactions can be positive or negative to either counterparty. The market value is uncertain and can vary over time with the movement in underlying market factors.

Capital is maintained on the exposure to CCR as per regulatory guidelines on Capital adequacy computation. The exposure is calculated using Current Exposure Method.

CCR limits for interbank counterparties are set on the basis of an internal model that considers parameters like net worth of the Group, Net NPA %, Credit Deposit Ratio. CCR limits for other counterparties are set on the basis of their internal ratings, Loan Equivalent Ratio and business requirement of the counterparty. These CCR limits are approved by the appropriate sanctioning authorities under the respective credit policies.

The Board-approved Investment Policy sets the broad framework for the management of Counterparty Credit Risk. The Board-approved Customer Appropriate Policy sets the framework to evaluate the Suitability of the customer and Appropriateness of the derivative to the client's hedging requirements. The MTM on client exposures are monitored on a daily basis. The Bank computes Loan Equivalent Ratio (LER) and reviews it periodically to evaluate the risk arising out of customer contracts. The Group does not recognize bilateral netting for capital computation.

₹ in million

DISCLOSURES ON REMUNERATION

A. Qualitative Disclosures:

a) Information relating to the composition and mandate of the Remuneration Committee:

The Nomination & Remuneration committee comprises of independent directors of the Bank. Key mandate of the Nomination & Remuneration committee is to oversee the overall design and operation of the compensation policy of the Bank and work in coordination with the Risk Management Committee to achieve alignment between risks and remuneration.

b) Information relating to the design and structure of remuneration processes and the key features and objectives of remuneration policy:

Objective of Banks' Compensation Policy is to:

- To maintain fair, consistent and equitable compensation practices in alignment with Bank's core values and strategic business goals;
- To ensure effective governance of compensation and alignment of compensation practices with prudent risk taking;
- To have mechanisms in place for effective supervisory oversight and Board engagement in compensation

The remuneration process is aligned to the Bank's Compensation Policy objectives.

c) Description of the ways in which current and future risks are taken into account in the remuneration processes. It should include the nature and type of the key measures used to take account of these risks:

In order to manage current and future risk and allow a fair amount of time to measure and review both quality and quantity of the delivered outcomes, a significant portion of senior and middle management compensation is variable. Further reasonable portion variable compensation is non- cash and deferred, over a period of 3 to 4 years.

In addition, remuneration process provides for 'malus' and 'clawback' option to take care of any disciplinary issue or future drop in performance of individual/ business/ company.

d) Description of the ways in which the bank seeks to link performance during a performance measurement period with levels of remuneration:

Individual performances are assessed in line with business/ individual delivery of the Key Result Areas (KRAs), top priorities of business, budgets etc. KRAs of Line roles are linked to financials, people, service and process (Quality) parameters and KRAs of non-Line Roles have linkage to functional deliveries needed to achieve the top business priorities.

Further remuneration process is also linked to Market salaries / job levels, business budgets and achievement of individual KRAs.

- e) **A discussion of the banks' policy on deferral and vesting of variable remuneration and a discussion of the bank's policy and criteria for adjusting deferred remuneration before vesting and after vesting:**

A discussion on Policy on Deferral of Remuneration

Employees are classified into following three categories for the purpose of remuneration:

Category I: Whole Time Directors (WTD)/Chief Executive Officer (CEO)

Category II: Risk Control and Compliance Staff

Category III: Other Categories of Staff

Following principles are applied for deferral / vesting of variable remuneration in accordance with RBI guidelines and Bank's compensation policy:

Category I and II

- a. Variable Pay will not exceed 70% of Fixed Pay.
- b. The Cash component of the Variable Pay will not exceed 50% of the Fixed Pay
- c. If Variable Pay is higher than 50% of Fixed Pay, at least 40% of Variable Pay will be deferred over a period of 3 years, or longer, on a pro-rata basis.

Category III

Variable Pay is payable as per approved schemes for incentive or Bonus:

- i) The Cash component of the Variable Pay will not exceed 60% of the Fixed Pay.
- ii) If Variable Pay is higher than 60% of Fixed Pay, at least 40% of Variable Pay will be deferred over a period of 3 years, or longer, on a pro-rata basis.
- iii) However, if Variable Pay is less than or equal to ₹ 10 lakhs, management will have the discretion to pay the entire amount as cash.

For adjusting deferred remuneration before & after vesting:

Malus: Payment of all or part of amount of deferred Variable Pay can be prevented. This clause will be applicable in case of:

- Disciplinary Action (at the discretion of the Disciplinary Action Committee) and/or
- Significant drop in performance of Individual/ Business/ Company (at the discretion of the Nomination & Remuneration Committee)
- Resignation of the staff prior to the payment date.

Clawback: Previously paid or already vested deferred Variable Pay can also be recovered under this clause.

This clause will be applicable in case of Disciplinary Action (at the discretion of the Disciplinary Action Committee and approval of the Nomination & Remuneration Committee)

f) Description of the different forms of variable remuneration (i.e. cash, shares, ESOPs and other forms) that the bank utilizes and the rationale for using these different forms:

The main forms of such variable remuneration include:

- Cash – this may be at intervals ranging from Monthly, Quarterly, Annual.
- Deferred Cash / Deferred Incentive Plan.
- Stock Appreciation Rights (SARs): These are structured, variable incentives, linked to Kotak Mahindra Bank Stock price, payable over a period of time
- ESOP as per SEBI guidelines.

The form of variable remuneration depends on the job level of individual, risk involved, the time horizon for review of quality and longevity of the assignments performed.

B. Quantitative Disclosures:

a) Number of meetings held by the Remuneration Committee during the financial year and remuneration paid to its members.

During year ended 31st March, 2015 4 meetings of Nomination & Remuneration committee was held. Each Member of the Nomination & Remuneration committee is paid a sitting fee of ₹ 30,000 per meeting.

a) Number of employees having received a variable remuneration award during the financial year.

Quantitative disclosure restricted to CEO, two Whole Time Directors and six Operating Management committee members as risk takers.

b) Number and total amount of sign-on awards made during the financial year.

Nil (previous year NIL)

c) Details of guaranteed bonus, if any, paid as joining / sign on bonus.

Nil (previous year NIL)

d) Details of severance pay, in addition to accrued benefits, if any.

Nil (previous year NIL)

e) Total amount of outstanding deferred remuneration, split into cash, shares and share-linked instruments and other forms

Outstanding SARs as at 31st March, 2015 – 100,614 rights (previous year 123,917 rights)

Outstanding ESOPs as at 31st March, 2015 – 644,816 equity shares (previous year 744,118 equity shares)

f) Total amount of deferred remuneration paid out in the financial year.

Payment towards SARs during year ended 31st March, 2015 ₹ 7.86 crore (previous year ₹ 2.63 crore)

g) Breakdown of amount of remuneration awards for the financial year to show fixed and variable, deferred and non-deferred.

Total fixed salary for the year ended 31st March, 2015 - ₹ 17.12 crore (previous year ₹ 14.71 crore)

Deferred Variable Pay*

SARs – 44,290 rights (previous year 44,692 rights)

ESOPs – 207,850 equity shares (previous year 279,600 equity shares)

Non Deferred variable pay* ₹ 3.44 crore (previous year ₹ 3.43 crore)

** Details relating to variable pay pertains to remuneration awards for the financial year 2013-14 awarded during current financial year. Remuneration award for the year ended 31st March, 2015 are yet to be reviewed and approved by the remuneration committee.*
